DETAILED ACTION

Election/Restrictions

1. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

The analogs in claims 78-83, and other combinations of substitution, insertion or deletion of at least amino acid from the sequence of microcin J25 further comprising a detectable group, not specifically recited in the claims.

2. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: there is no common core structure in analogs of claims 78-83, because the number of amino acid invariants derived from the sequence of microcin J25 is not defined.

Applicant is required, in reply to this action, to elect a single species i.e., the amino acid sequence of an analog of microcin J25 and the identity of the detectable group must be defined specifically to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a

claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).
